

Vicky Ayebare

Affiliation: Mbarara University of Science and Technology (MUST)

Current role: Undergraduate Student, Biomedical Engineering

Location: Mbarara, Uganda

Workshop interests: Low-field MRI scanner assembly

I am an undergraduate biomedical engineering student passionate about making neurological imaging more accessible in resource-constrained settings. My work focuses on developing lightweight deep learning architectures for low-field MRI scanners to improve diagnostic accuracy. At the DELTA DIY MRI Workshop, I hope to gain hands-on experience building low-field scanners and connecting individual subsystems, while learning from researchers working across hardware, acquisition, and reconstruction. I look forward to contributing where I can and sharing what I learn with others.
