

DELTA DIY MRI Travel Award Recipient Blurb

Chavalchart Herabut

Affiliation: School of Biomedical and Health Systems Engineering at Arizona State University

Current role: Graduate student

Location: Tempe, Arizona, USA

Workshop interests: RF coils, and Gradients, Magnet

I am a Ph.D. candidate in Biomedical Engineering working on improving RF coil systems for X-nuclei MRI. My research focuses on developing and optimizing multinuclear RF coils to improve the sensitivity of low-signal nuclei for metabolic imaging. At the DELTA DIY MRI Workshop, I hope to connect with other RF coil builders, exchange practical design and fabrication techniques, and learn from researchers working across the entire MRI hardware stack. I am also interested in gaining a better understanding of magnet and gradient system design and how these components integrate with RF hardware to build complete MRI systems.
