## Samuel Rubin

**Affiliation:** Department of Bioengineering, University of California Berkeley

**Current role:** Graduate Student

**Location:** Berkeley, CA, USA

**Workshop interests:** Data acquisition | Reconstruction | System phantom

I am a 3rd year PhD Student working on CEST-MRI for imaging liver inflammation and fibrosis. My current research focuses on detection of viral vector immunogenicity in the murine liver, and designing novel sequences for detection. My undergraduate research was in low-field NMR relaxometry and hyperpolarization, so I'm looking forward to combining low field and low cost devices with my knowledge of imaging, and broadening my scientific community with the DELTA DIY MRI workshop. I hope to advance scientific outreach at my institution and bring in new voices to the field with the lessons and skills learned here.
